

ANTIBODY MEDIATED ACUTE REJECTION: 2 CASES AT MILITARY HOSPITAL 103

*Vu Minh Duong, Hoang Manh An, Vu Nhat Dinh, To Vu Khuong, Bui Van
Manh*

We have assessed two cases of kidney transplant recipients with a early episode of Antibody Mediated Acute Rejection, the results showed: Cross-match test would be negative even with recipients's Donor Specific Antibody (DSA). Antibody Mediated Acute Rejection may occur even with negative cross-match. The recipient with multiple serum antibodies, Antibody Mediated Acute Rejection may happen even with no DSA. Treatment of Antibody Mediated Acute Rejection episode in combined of Plasmapheresis and gammaglobuline would have good outcome.

Key words: Kidney transplantation, Antibody Mediated Acute Rejection.
